

USF POLICE DEPARTMENT MEDIA RELEASE

DATE: October 01, 2014

CONTACT: Asst. Chief Chris Daniel, PIO
(813) 974-3961

SUBJECT:  USF Police to Conduct Comprehensive
Roadside Safety Checkpoint

TAMPA: The University of South Florida Police Department will host a one-hour Comprehensive Roadside Safety Checkpoint on the USF Campus on October 11, 2014, beginning at 4,

1. Introduction
The purpose of this study is to investigate the effects of the independent variable on the dependent variable. The study is designed to explore the relationship between the two variables and to determine the extent to which the independent variable influences the dependent variable.

2. Methodology
The study was conducted using a quantitative research design. The data was collected through a series of experiments and surveys. The independent variable was manipulated in a controlled environment, and the dependent variable was measured using standardized instruments.

3. Results
The results of the study indicate a significant positive relationship between the independent variable and the dependent variable. The data shows that as the independent variable increases, the dependent variable also increases, suggesting a direct causal link.

4. Conclusion
Based on the findings, it can be concluded that the independent variable has a strong influence on the dependent variable. The results support the hypothesis that the independent variable is a key factor in determining the outcome of the dependent variable.

5. References
The study is based on the following references:
