

Opportunities After Graduation

Industrial engineering discipline has historically attracted students to our academic programs with a variety of career objectives and from a host of disciplines and academic interests. At the undergraduate level, students find the fields' characteristic flexibility of career paths/choices very appealing. Solid grounding in mathematical and statistical modeling tools together with their ability to take a broad business view of the engineering decision problems make IEs highly desirable in variety of engineering teams.

IEs find employment in a variety of sectors including manufacturing, logistics, transportation, analytics, economic and financial sectors, healthcare systems and services, consulting, and business development.
